

**Control: genuine EdH/Barnett vs forced Larmor precession ( $^{151}\text{Eu}$   $F=6$ , transverse,  $+\Omega$ )**  
**DDI OFF keeps  $|F| = 6$  and  $\langle L_z \rangle = 0$  (spin just rotates); DDI ON depolarises AND makes vortices**

**(a) spin length  $|\langle F \rangle|$**

**(b)  $\langle F_z \rangle$  (spin along rotation axis)**

**(c)  $\langle L_z \rangle$  (vortices) — 0 without DDI**
